

JMeter documentation in JIRA

This documents records the steps taken to document the JMeter part of the final assessment in JIRA.

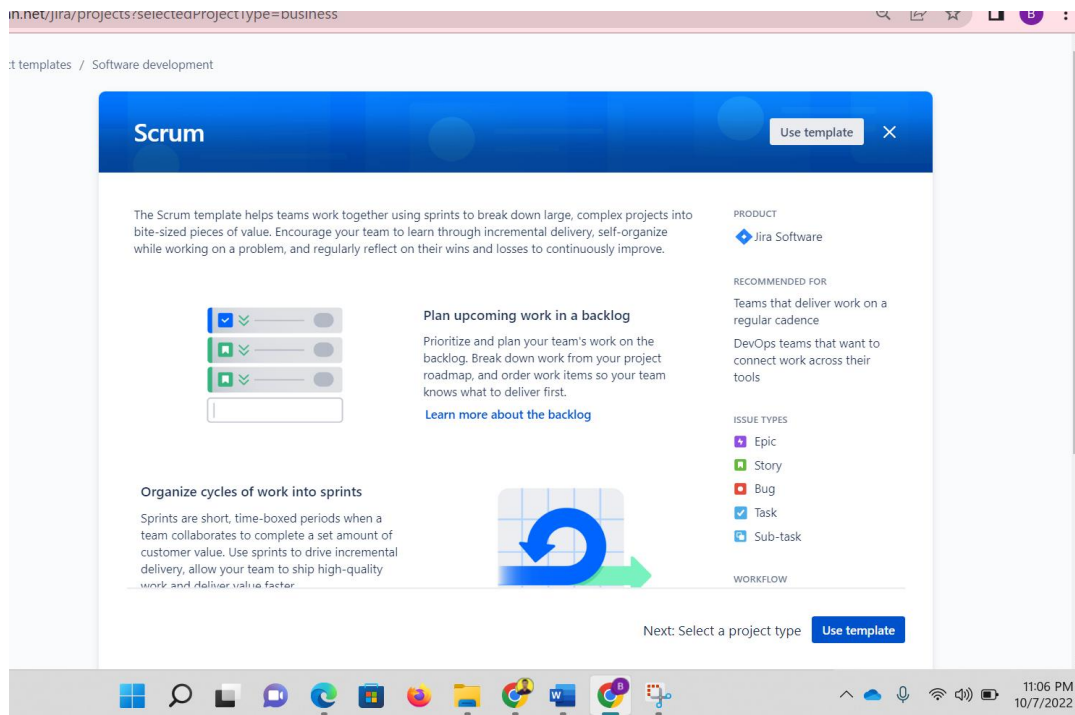

i) Creating a new project

b) Selecting Scrum as the agile framework used

c) Selecting use template of scrum

d) Selecting company managed project

and practices in a self-contained space. Mix and match agile features to support your team as you grow in size and complexity.

Simplified configuration

Get up and running quickly, with simplified configuration.

Anyone on your team can set up and maintain

Settings do not impact other projects

Easy setup for issue types and custom fields

Simple configuration for multiple workflows

Access level permissions

Essential features

Select a team-managed project

projects in a standard way. Encourage and promote organizational best practices and processes through a shared configuration.

Expert configuration

Benefit from complete control with expert configuration, customization and flexibility.

Set up and maintained by your Jira admins

Standardized configuration shared across projects

Complete control over issue types and custom fields

Customizable workflows, statuses and issue transitions

Detailed permission schemes

Advanced features

Select a company-managed project

The last project you created was a company-managed project

e) Adding the project name

Add project details

You can change these details anytime in your project settings.

Name

Big Picture and Automation Testing

Key 

BPAT

☐ Share settings with an existing project

☐ **Connect repositories, documents, and more**
Sync your team's work from other tools with this project for better visibility, access, and automation.

Template

Change template

Scrum

Sprint toward your project goals with a board, backlog, and roadmap.

Type

Change type

Company-managed

Work with other teams across many projects in a standard way.
